Scotts Lawn Seed

This is a top-quality blend of grasses for open, sunny or lightly shaded lawns. Growing ability is assured by Scotts system of laboratory control that checks the seed before it is packaged. If you are building a new lawn, sow Scotts Seed at the rate of 4 to 6 lbs. per 1000 sq. ft. If you already have a lawn but want to improve it, sow 2 or 3 lbs. per 1000 sq. ft., depending on the present stand of grass.

Scotts Turfbuilder

Supplies all the needed elements in correct proportions for feeding grass and trees. Just before sowing seed apply Scotts Turfbuilder. This special grass food does not harm seed so it is not necessary to delay seeding.

In constructing a new lawn distribute 20 lbs. of Turfbuilder per 1000 sq. ft. and rake it into the top 2 or 3 inches of soil. Use just half this amount, 10 lbs. per 1000 sq. ft., when feeding an established lawn. Care should be used to make application only when the grass is dry. An abundant supply of the right type of nourishment not only encourages old grass to spread out and take a new lease on life but it also insures healthier and more vigorous growth of new grass.

Turf-Maker

Highest quality lawn seed available anywhere. Blended to produce fine permanent lawns. Contains Certified Colonial Bent, Illahee Creeping Red Fescue, heavyweight Kentucky Blue Grass, and Fancy Red Top. Lb. \$1.40; 3 lbs. \$4.15; 5 lbs. \$6.80; 25 lbs. \$33.75; 50 lbs. \$66.50.

McArdle's Special. Our own special mixture particularly adapted to soil conditions in this locality. Possesses exceptional staying qualities and produces a rich green lawn of thick growth. Lb. \$1.20; 5 lbs. \$5.75; 25 lbs. \$27.50; 100 lbs. \$105.00.

Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crab grass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

SELECTED GRASSES AND FIELD SEEDS

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

Illahae Creeping Red Fescue. A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.10; 10 lbs. \$10.00; 25 lbs. \$23.75.

Kentucky Blue Grass. Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.00.

Fancy Red Top. A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth, and nurses the permanent grasses until they become established. Lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.00.

Timothy. A tall-growing meadow grass used mostly for hay and pasture. Grows quickly. Lb. 60 cts.; 10 lbs. \$5.50; 25 lbs. \$12.50.

Colonial Bent. This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$1.75; 10 lbs. \$17.00; 25 lbs. \$40.00.

Domestic Rye Grass. Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$6.25.

Orchard Grass. A field grass used in pastures and meadows. Lb. 75 cts.; 10 lbs. \$7.00; 25 lbs. \$16.25.

Perennial Rye Grass. A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 45 cts.; 10 lbs. \$4.25; 25 lbs. \$10.00.

Poa trivialis. Rough-stalked Meadow Grass. This variety of Blue Grass is available again. Thrives in shaded lawn areas. Deep green in color. Lb. \$1.25; 10 lbs. \$11.50.

New Zealand Chewing's Fescue. A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.00; 10 lbs. \$9.50; 25 lbs. \$22.50.

Perennial and Biennial Flower Seeds

Many hardy perennials and biennials (plants which require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.

Jim, Kathy, and Maureen McArdle admire the beauty of Hardy Phlox.

To Help Control Crabgrass

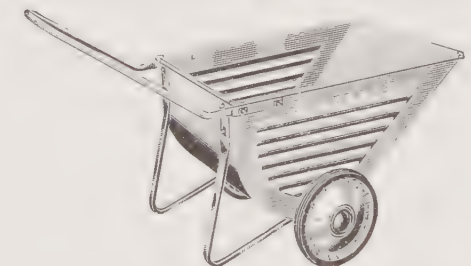

Experts recommend cutting lawn grass high during the hot summer months, which is the crab-grass season. This treatment permits the grass to shade the crab-grass seedlings and prevent their rapid growth. In early spring and fall mow the lawn as close as possible, for at this time the grass can outgrow the crab-grass.

To Grow Good Peas

To grow good Peas in Greenwich, plant them as early as possible. A good tip is to open the row in the early morning, and allow it to be exposed to the rays of the sun for five or six hours. Then sow the Peas in the late afternoon. This procedure increases the soil temperature, thereby hastening germination. 2 pounds of seed required for a 100-foot row.

Seed Potatoes

½-peck Potatoes (7½ lbs.) will plant a 100-foot row. From this amount a yield of two bushels can be expected. Cut the seed Potatoes into three to six pieces, depending upon size of Potato, each with at least one eye. Cut your Potatoes a few days before planting so that the cut surfaces can form callosities.

Chippewa. A smooth white Potato coming about a week later than Irish Cobblers. A disease-resistant variety yielding heavily.

Irish Cobbler. The best extra-early white variety. Smooth, round, creamy white tubers with flesh of fine taste. Very productive on any soil.

Prices of above varieties, pk. (15 lbs.) \$1.35; ½bus. (30 lbs.) \$2.50; bus. (60 lbs.) \$4.85; 100-lb. bag \$7.50.

New HARDY CHRYSANTHEMUMS

Space the plants $2\frac{1}{2}$ to 3 feet apart. To obtain bushy plants it is advisable to pinch the growing shoots once or twice during the growing season. The first pinching should be done when the plants are about 6 inches tall. At this time remove about an inch of the soft growing tips of the main shoots, to induce lateral branching. When these lateral branches are 10 inches tall, another inch of their tips should be removed. Do not pinch the varieties listed on this page later than July 25. Larger flowers may be obtained by disbudding.
